

TIPS FOR MAPPING SCIENCE

At times the content outline may feel “vague”...with less description or information than you feel you need to give an accurate score. Do the best that you can, knowing that every line of content will be clarified as you move forward through the process to look at standards and skills. Make note of the line number you are concerned about. If you take something on, only to find that it isn’t what you originally thought it was, you will have many opportunities to revise your score.

Human Biology (line 5,370) is covered in depth in the Anatomy and Physiology section (line 6,300).

Use the line numbers on the outline of science headings below to jump to a different section. These rough categories are used strictly for organizational purposes. They are in no way intended to suggest that the content of your course will be limited to that section of the outline.

SCIENCE TOPICS AND LINE NUMBERS

Life Science: 10

 Biology: 20

 Human Biology: 5,370, *also covered in-depth in Anatomy and Physiology*

 Anatomy and Physiology: 6,300

Physical Science: 17,520

 Astronomy: 17,530

 Meteorology: 19,560

 Oceanography: 20,870

 Geology: 21,760

 Chemistry: 24,760

 Physics: 29,540
